

# MagniBlend

A Color Mixing Retrofit from  **MAGNILUMEN PLUS<sup>TM</sup>**

**INTEGRATE MAGNILUMEN PLUS INTO YOUR DISPLAY CASE LIGHTING TO DELIGHT SHOPPERS AND GROW YOUR SALES...**

Jewelry display lighting is important for a few reasons. First, it needs to be bright enough so that customers can see the jewelry and its details clearly. Second, it should be flattering to the jewelry and the customers. Third, it needs to be low-maintenance and long-lasting.

The proper lighting can essentially transform any space from dim and dreary into something warm and inviting. With the use of our Magnilumen Plus MagniBlend strip lights, you can easily add illumination to those hard to illuminate cases. These easy to install lighting solutions can be used just about anywhere including under cabinets and on shelves. Best of all, the LED operation is ideal for a low maintenance and long-lasting solution.

## CREATING THE “WOW” FACTOR WITH MAGNIBLEND

As a retailer, “Color Mixing” maybe be your solution to have your products look true to color and detail in the display cases. ZLEDLighting has a special color temperature LED retrofit board to add to its Magnilumen product line called MagniBlend, when 3000K is too warm and 4000K is too cold.

MagniBlend LED strips come in two version with a choice of 3000K/4000K for the look and feel of 3500K or 3000K/5000K for a 4000K ambiance.

The chips are installed in an every other color temperature pattern and have a CRI of 90. Once installed, you will not only save money on your energy cost, but your products will look much better.

This will create the “WOW” effect to the consumers eyes as they enter your store, therefore creating a better shopping environment and selling more product that your competitors!

**LED boards have either 30K/40K or 30K/50K chips installed in every other color temperature pattern.**

**Seeing it is believing it! Call your ZLEDLighting Rep today for your sample!**
